

What is Converta Bio NPK?

Converta Bio NPK is a liquid biofertiliser based on nitrogen fixing bacteria as well as phosphorus and potassium solubilising bacteria. Converta aims to unlock nutrients already present in the soil and hence reduce rates of chemical fertiliser.

How Converta Bio NPK works:

- Helps plants develop a powerful root system to enable early growth and improve yields
- Increases nutrient availability by chelation

Benefits:

- Reduced rates of chemical fertiliser
- Improved tolerance to biotic and abiotic stress
- Improved crop quality
- Reduced nutrient leaching
- No harmful effects on the environment

Application Info:

- 6 litres of Converta per hectare per month
- Compatible with all grow media
- Can be applied via fertigation system

Crops:

- For use in soft fruit, arable crops, vegetable production, grassland, amenity land and all other edible and non-edible crops.
